Infrastructure workflows

Before you begin

You can use these workflows to create and maintain the infrastructure used with the Astra Control Center deployment model. In most case, the workflows can also be used with Astra Control Service.

These workflows can be expanded and enhanced by NetApp at any time and so you should review them periodically.

General preparation

Before using any of the Astra workflows, make sure to review [Prepare to use the workflows](#).

Workflow categories

The infrastructure workflows are organized in different categories to make it easier to locate the one you want.

| Category | Description |
|---------------------|---|
| Identity and access | These workflows allow you to manage identity and how Astra is accessed. The resources include users, credentials, and tokens. |
| Buckets | You can use these workflows to create and manage the S3 buckets used to store backups. |
| Storage | These workflows allow you to add and maintain storage backends and volumes. |
| Clusters | You can add managed Kubernetes clusters which allows you to protect and support the applications they contain. |

Identity and access

List users

You can list the users that are defined for a specific Astra account.

1. List the users

Perform the following REST API call.

| HTTP method | Path |
|-------------|------------------------------------|
| GET | /account/{accountID}/core/v1/users |

Additional input parameters

In addition to the parameters common with all REST API calls, the following parameters are also used in the curl examples for this step.

| Parameter | Type | Required | Description |
|-----------|-------|----------|---|
| include | Query | No | Optionally select the values you want returned in the response. |

Curl example: Return all data for all users

```
curl --location -i --request GET
'https://astra.netapp.io/accounts/<ACCOUNT_ID>/core/v1/users' --header
'Accept: */*' --header 'Authorization: Bearer <API_TOKEN>'
```

Curl example: Return the first name, last name, and id for all users

```
curl --location -i --request GET
'https://astra.netapp.io/accounts/<ACCOUNT_ID>/core/v1/users?include=first
Name,lastName,id' --header 'Accept: */*' --header 'Authorization: Bearer
<API_TOKEN>'
```

JSON output example

```
{
  "items": [
    [
      "David",
      "Peterson",
      "844ec6234-11e0-49ea-8434-a992a6270ec1"
    ],
    [
      "Scott",
      "Morris",
      "2a3e227c-fda7-4145-a86c-ed9aa0183a6c"
    ]
  ],
  "metadata": {}
}
```

Buckets

List buckets

You can list the S3 buckets defined for a specific Astra account.

1. List the buckets

Perform the following REST API call.

| HTTP method | Path |
|-------------|--|
| GET | /account/{accountID}/topology/v1/buckets |

Curl example: Return all data for all buckets

```
curl --location -i --request GET
'https://astra.netapp.io/accounts/<ACCOUNT_ID>/topology/v1/buckets'
--header 'Accept: */*' --header 'Authorization: Bearer <API_TOKEN>'
```

Storage

List storage backends

You can list the available storage backends.

1. List the buckets

Perform the following REST API call.

| HTTP method | Path |
|-------------|--|
| GET | /account/{accountID}/topology/v1/storageBackends |

Curl example: Return all data for all storage backends

```
curl --location -i --request GET
'https://astra.netapp.io/accounts/<ACCOUNT_ID>/topology/v1/storageBackends'
--header 'Accept: */*' --header 'Authorization: Bearer <API_TOKEN>'
```

JSON output example

```

{
  "items": [
    {
      "backendCredentialsName": "10.191.77.177",
      "backendName": "myinchunhcluster-1",
      "backendType": "ONTAP",
      "backendVersion": "9.8.0",
      "configVersion": "Not applicable",
      "health": "Not applicable",
      "id": "46467c16-1585-4b71-8e7f-f0bc5ff9da15",

      },
      "ontap": {
        "backendManagementIP": "10.191.77.177",
        "managementIPs": [
          "10.191.77.177",
          "10.191.77.179"
        ]
      },
      "protectionPolicy": "Not applicable",
      "region": "Not applicable",
      "state": "Running",
      "stateUnready": [],
      "type": "application/astra-storageBackend",
      "version": "1.0",
      "zone": "Not applicable"
    }
  ]
}

```

Clusters

List managed clusters

You can list the Kubernetes clusters currently managed by Astra.

1. List the clusters

Perform the following REST API call.

| HTTP method | Path |
|-------------|--|
| GET | /account/{accountID}/topology/v1/managedClusters |

Curl example: Return all data for all clusters

```
curl --location -i --request GET
'https://astra.netapp.io/accounts/<ACCOUNT_ID>/topology/v1/managedClusters
' --header 'Accept: */*' --header 'Authorization: Bearer <API_TOKEN>'
```
